SENTRY VMS

INTELLICONE® SENTRY VMS

MVIS is able to supply the Intellicone® Sentry VMS, designed to integrate seamlessly with its range of colour mobile variable message signs, manufactured by Bartco UK. The Sentry is a contactless sensor that can be positioned to detect vehicles or personnel and use this as a trigger to wirelessly activate a nearby MVIS sign or Intellicone Portable Site Alarm. The MVIS sign can be supplied with CCTV providing a real time recording capability in response to a triggering event.

Applications include:

- site entrance (such as site protocols and speed limit)
- site egress (such as providing a dynamic 'works vehicles merging' alert)
- over-height warning (warning over-height vehicles they are nearing an over-height structure).

The Sentry has a line of sight range of at least 50 metres* and communicates wirelessly with an Intellicone TMU controller fitted to the MVIS VMS. The TMU can be set to control the time duration of messages displayed on the sign and includes an override button that lets a user activate the sign.

Contact us today with your hire requirements and we will work closely with you to meet your specification and budget.

FEATURES

- Intelligent wireless detection technology
- Easy to use self-calibrating technology
- Versatile mounting system
- Communicates seamlessly with Intellicone® compatible equipment
- Ultrasonic beam technology (three metre beam)
- User friendly touch control
